

Welcome to our April 2020 newsletter, bringing you an update on our most recent and upcoming activities.

Our Response to COVID-19

There is no doubt that the current circumstances the global community is facing with the outbreak of COVID-19 will change our way of life for the foreseeable future.

In response to this, and to ensure there are no disruptions to our analysis services, we have implemented secure policies and procedures for all of our staff to adhere to, including:

- Routine-use and clinical trial studies have been prioritized to ensure there are no disruptions to the care of patients;
- Expanded support contact points to ensure staff are available to answer all support requests as they are received;
- For several weeks staff non-essential to the analysis procedure have been asked to work from home to reduce human-to-human contact;
- Additional security policies implemented to ensure staff have reliable and secure remote working access available in the event of stricter lockdown protocols.

These actions have allowed for our service centre to remain open and accessible to all hospitals and scanning centres throughout this difficult time. Assistance for our customers is our highest priority, please contact us if you need support regarding any of our products or services at the following addresses:

COVID-19: Patient Resources

As the global voice for thalassaemia patients, the Thalassaemia International Federation (TIF) has been working tirelessly with its international group of experts (doctors and patients) to develop a series of educational material and resources specifically in relation of COVID-19 and haemoglobin disorders. These resources include:

- The COVID-19 Pandemic & Haemoglobin Disorders
- A Useful Health & Nutrition Short Guide for the COVID-19 Pandemic
- A TIF-Proposed Haemoglobinopathy Patient Pathway during the COVID-19 Pandemic
- Q&A: The COVID-19 Pandemic & the Haemoglobinopathy Patient

The Q&A resource in particular is an invaluable resource that has been developed by TIF's Medical Advisor, Dr Michael Angastiniotis, on the basis of queries TIF has received by patients themselves with regard to the coronavirus outbreak.

To view this material and other resources made available through TIF, please visit their website directly at:

<https://thalassaemia.org.cy/covid-19-pandemic/tif-material-on-covid-19/>

About the Thalassaemia International Federation (TIF)

TIF is a globally renowned not-for-profit, non-government organisation founded in 1987 by a small group of patients and parents who represented various national Thalassaemia Associations in Cyprus, Greece, UK, USA, and Italy. Since its creation, TIF has worked in official relations with various official health bodies and patient orientated organisations, including the World Health Organisation (WHO) since 1997.

New FerriScan website launched

Resonance Health is delighted to announce that we have developed a website specifically for FerriScan® and our other regulatory cleared iron assessment products and services, which include FerriSmart, Cardiac T2*, and Bone Marrow R2-MRI.

The new FerriScan® website will allow us to provide an information hub for patients, clinicians, radiology, and pharmaceutical companies wishing to discover more about our services.

Resources can be found at the bottom of every individual service page, with additional materials being added regularly as part of our resource library.

On the home page under 'How FerriScan Can Help You'

you will find additional information tailored towards clinicians, patients, and pharma companies.

The clinician page explores the advantages of FerriScan over alternative solutions, including validation data, and reimbursement information.

The patient page explores our most frequently asked questions. If your question is not listed there, please contact us directly.

The pharma page provides an overview of our analysis services, security protocols, unique standardisation, and project management services (CRO).

For further information, please visit our brand new FerriScan® website at www.ferriscan.com.
